Gabriel & Company have been an approved supplier to the railway industry for over sixty years. We are now the largest manufacturer in the UK of handrails and interior/exterior bodywork fittings. In recent years we have completed many major contracts for railway operators in Europe, Asia and Africa including Eurostar, KCRG Hong Kong and various London Underground projects.

We manufacture handrails, luggage racks and grab poles in stainless steel, powder coated steel or aluminium to meet your requirements. Many other bespoke bodywork components, such as handles, partition screens, cycle racks and metal seating can be efficiently produced.

We have introduced a range of handrails and toilet fittings for special needs, manufactured from the special Gabriel patterned tubing for extra grip and supplied with a 'warm touch' hard wearing covering in a choice of 30 standard colours.

Within our 30,000 square feet of production area, our comprehensive facilities include the latest CNC tube bending

capabilities, modern welding & fabrication plant and our own foundry capable of producing both carbon and stainless steel castings.

We also have in-house polishing and a fully equipped machine shop. All are backed by our experienced development team and using the latest design and production techniques we can offer problem solving and/or advice on passenger safety and access. One of our proven strengths is working in partnership with the customer, for example, helping to reduce cost or simplifying the design at conceptual stage through close involvement with your Designers, or Technical Specifiers.

Our mission statement:

We strive to be the leader in quality and service, providing added value to each and every one of our customers.

As part of our commitment to quality, all production at Gabriel & Co complies with BS EN ISO 9002; 1994 approved.

Gabriels also manufacture custom made handrails, balustrades and architectural metalwork as well as our range of textured grip Abrotube handrails and Abroclamp jointing brackets. For details of these or any other information please contact our Sales Office at the address shown below.
