STAINLESS STEEL AND ALLOY STEEL CASTINGS**

## **SYSTEM 2000 HANDRAILS**

*System 2000 handrails at  
the Beloit Corporation  
Research Centre.*

## **HANDRAIL DIVISION**

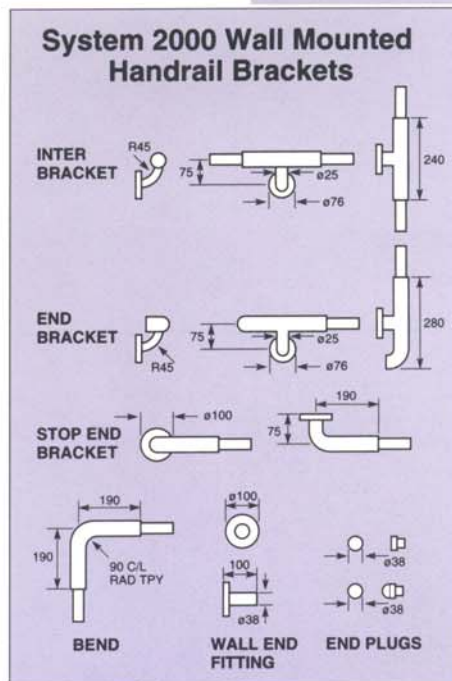

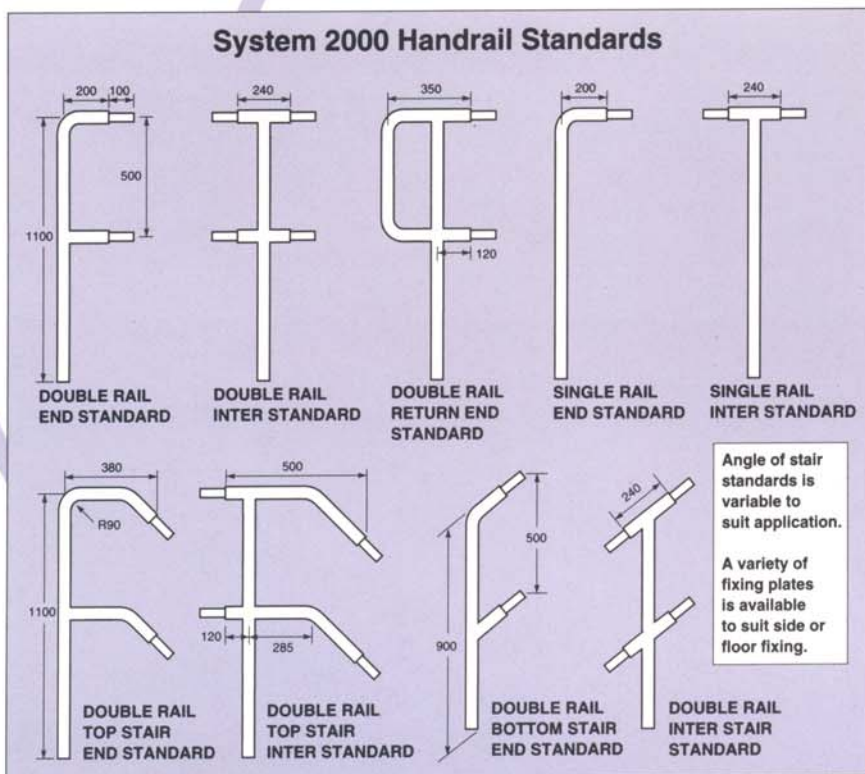

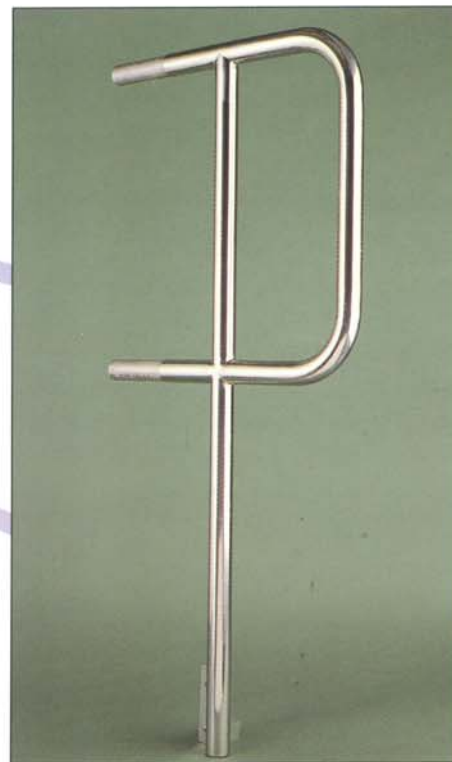

**Gabriels System 2000 modular stainless steel handrails are perfectly suited for use in commercial, industrial and prestige developments.**

Having a refined look, System 2000 handrails are durable and virtually maintenance free, which makes them ideal for heavy duty areas where appearance is also important. System 2000 is also practical for outdoor locations as well as for serving the largest of process plants.

System 2000 is manufactured from 38mm diameter stainless steel tube and is available in a range of finishes:- mirror polished, satin finish and 316 quality for arduous conditions.

Gabriels System 2000 utilises basic modular standards and brackets which makes them very flexible. Tubes can be easily cut on-site so that any possible problems arising from a variation in the original building concept are eliminated. Joints are secured by using a special, powerful, bonding agent which means there is no need for on-site welding or polishing, and the result is a smooth clean-line handrail without the use of bulky brackets.

Full installation instructions are available.

As part of our commitment to quality, all production at Gabriel & Co complies with BS 5750 Part 2 1987 and ISO 9002.

Gabriels also manufacture custom made handrails, balustrades and architectural metalwork as well as our range of textured grip Abrotube handrails and Abroclamp jointing brackets. For details of these or any other information please contact our Sales Office at the address shown below.
